

BioArmor Hearing Health

A complete antioxidant formulation to support the body in 24-hour cellular protection, energy production, balance disorders, tinnitus and overall health.

What are free radicals?

Free radicals are “unbalanced” molecules, meaning that they are unpaired electrons and are in need of electrons to be fully balanced. They are highly unstable and can cause damage to cells. Antioxidants connect with the unpaired free radicals, producing a “balanced” unit. The reduction in free radicals helps reduce oxidative stress.

What happens when free radicals are released in the body?

Free radicals lead to damage in the DNA, RNA, cell membranes, proteins and lipids of healthy cells.

BioArmor Hearing Health is a vitamin formulation that is high in antioxidants. Antioxidants have been shown to reduce oxidative damage and inflammation that is commonly present in many disease states.

The release of free radicals and oxidative damage are associated with the cause of many diseases and signs of ageing, including hearing loss, tinnitus and balance disorders. BioArmor Hearing Health is an antioxidant formulation designed to assist the body in reducing oxidative damage and helping the body to naturally produce energy.

What are the benefits?

BioArmor Hearing Health is a complete nutritional supplement for the whole body, and when taken as recommended (3 capsules twice a day), is designed to have the following main benefits:

Supports Tinnitus Reduction

There is a direct correlation between oxidative damage (caused by toxins called free radicals that are produced by our bodies during the process of turning oxygen into energy), inflammation and the development of sensory neural hearing loss (caused by damage to the circuits that take sound signals to the brain) and tinnitus.

The effect of free radicals (namely oxidative stress) can be controlled through the use of an antioxidant and glutathione elevating agents, i.e. Hearing Health.

Improves Balance Disorders

Balance disorders can be a symptom of peripheral and central lesions/dysfunctions. They may also be due to syndromes, diseases, toxins, trauma, or glutathione depletion.

BioArmor Hearing Health addresses many of these causes, and has proved to be successful in improving balance disorders.

Enhances Immune Function

Many of the components of Hearing Health specifically aid in the enhancement of the body's immune function, which is critical for fighting off disease and infection.

Reduces Inflammation

BioArmor Hearing Health also has an anti-inflammatory effect on cells and tissues, promoting healthy muscles and helping to protect the body and heal faster.

Increases Energy Levels

Many of the ingredients have a direct, positive impact on energy levels, using natural energy enhancers to boost the body.

Improves Overall Health

Each component of Hearing Health not only provides specific benefits, but contributes towards improving overall health.

No Heavy Metals or Additives

BioArmor Hearing Health contains no heavy metals, which could have adverse reactions with some of the components.

It is also free of sodium, wheat, yeast, gluten, fish, peanuts, milk products, trans fats, cholesterol and artificial sweeteners.

**What's in the bottle?**

Hearing Health features an impressive combination of vitamins and minerals that each play a critical role in the body:

Vitamin A

Helps build the immune system, support healthy vision and fight infection.

B-vitamins, biotin and pantothenic acid

Vitamins B1, B2, B3 and B6, as well as biotin and pantothenic acid, work together to provide increased energy. Vitamin B12 helps to enable folic acid in the body, and also protects nerve endings.

Vitamin C

Assists in the absorption of iron from our diets, helps to build and protect the immune system, the thyroid and neurotransmitters, and helps in the production of collagen, for healthier skin.

Vitamin D

Vitamin D promotes healthy bones, and can be used in preventing psoriasis. and heal faster.

Vitamin E

Counters the effects of free radicals, promotes faster healing, improves skin and immune health, and has anti-ageing properties.

Alpha lipoic acid

A heart health booster that also functions as diabetes support, and helps to counter high cholesterol and cataracts.

Calcium

Calcium supports DNA health, promotes bone density and dental health.

Chromium

Plays a vital role in glucose metabolism. It offers both immune and diabetic support, and can assist in reversing insulin resistance.

Coenzyme Q-10

Promotes healthy cells, tissue and organs, and acts as a catalyst to the chemical reactions within the body, including energy production.

Folic Acid and magnesium

Folic acid is important in DNA synthesis and cell division, while magnesium promotes healthy DNA.

L-Carnitine

Provides energy. Plays a role in preventing angina and heart muscle atrophy. It also offers support for those diagnosed with diabetes, cancer, HIV/AIDS, compromised liver function, hypertension and attention deficit disorder.

N-acetyl cysteine

Active in glutathione production, and is a powerful antioxidant that also boosts immune function, and promotes healthy hair, skin and nails, as well as respiratory and heart health.

Selenium

Well-known for its antioxidant properties, as well as boosting glutathione production, and providing thyroid, immune and prostate support.

Zinc

Zinc aids in digestive health and skin health, as well as boosts both immune and insulin function. It also promotes healthy DNA.
